

1. Which tag add headers and footers to multiple ISML pages?

- a. <isinclude template=" " >
- b. <isdecorate template=" ">
- c. a custom tag
- d. <isinclude url=" ">

2. Which node is a Call node?

b)

3. Where do you define input and output parameters for a script pipelet?

- a. Inside the execute function of the script.
- b. In the parameters of the execute function of the script
- c. In the pipeline XML
- d. In the beginning comment of the script

4. What is the difference between Jump node and Call node?

- a. With a jump node, only public start nodes can be called
- b. With a jump node, a secure connection is required
- c. With a jump node, the workflow does not return to calling pipeline

5. Which types are available for form fields? (select all that apply)

- a. Number
- b. Boolean
- c. String
- d. Integer
- e. Enum of string
- f. Date

6. Which group includes all roles that use Demandware Realm?

- a. Developers and Administrators
- b. Developers, merchants and customers
- c. Merchants, developers and administrators
- d. Customers, merchants, developers and administrators

7. You can view all files contained in a custom cartridge located on a demandware server from Business Manager
- FALSE
 - TRUE
8. Select the code for including a remote pipeline in a template. The remote pipeline called "Account" and start node called "include". No parameters required for this pipeline (Select all that apply)
- `<iscomponent pipeline="Account-Include">`
 - `<isinclude url="{URLUtils.url('Account-Include')}">`
 - `<isremote url="{URLUtils.url('Account-Include')}">`
9. Error messages can be defined for which types of field errors? (select all that apply)
- Value-error
 - Range-error
 - Parse-error
 - Missing-error
 - Format-error
10. Which commonly used objects are available in scripts as properties?
- customer, basket, session, dictionary
 - None, all objects must be accessed through the dictionary
 - customer, basket, session
 - customer, request, session
11. If you have used the valid import or require statements, which objects controllers have access to? (select all that apply)
- customer
 - request
 - response
 - session
12. Which is the proper demandware script call for creating a custom object named co of the custom object type?
- `var co: CustomObject = CustomObjectMgr.createCustomObject('SpecialCustomer', UniID);`
 - `var co: CustomObject = CustomObjectMgr.createCustomObject(UniID);`
 - `CustomObject = CustomObjectMgr.createCustomObject('SpecialCustomer', UniID);`
 - `var co: CustomObject = CustomObjectMgr.createCustomObject('SpecialCustomer');`
13. What must you do to submit a FormAction?
- Pass the dynamicHtmlName attribute of the action in the HTML form Action

- b. Pass the htmlName attribute in the name attribute of the submit input
- c. Pass the htmlName attribute of the action in the HTML form action

14. Where can a page scoped variable be accessed?

- a. Only in the ISML in which it is declared
- b. Locally included ISML
- c. Any ISML in the same request
- d. Remotely included ISML

15. When should explicit database transaction handling be used?

- a. The transaction should be always be committed
- b. The transaction spans several steps which all must be successful
- c. You want to specify which database transacted against
- d. You are transacting against an external database

16. It is the best practice to always write debug information to ScriptLog output parameter before writing it into a log file at the end of each request?

- a. FALSE
- b. TRUE

17. How is a slot created ?

- a. By using isslot statement in an ISML template
- b. By using Business Manager
- c. By using createslot method in a script
- d. By using _SYSTEM_Slot-Render pipeline in an ISML template

18. In Ux Studio, creating a new project using Demandware Storefront Cartridge will create an empty cartridge with empty sub-folders.

- a. FALSE
- b. TRUE

19. Which are valid content slot contexts? (select all that apply)

- a. Product and Global
- b. Global and Customer
- c. Category and Global
- d. Category and Product

20. By using Explicit transaction handling you can group transactions over multiple requests

- a. FALSE
- b. TRUE

21. Which tag prematurely exits in isloop?
- a. isbreak
 - b. isexit
 - c. isnext
 - d. iscontinue
22. Catalogs are not shared between sites within organization
- a. FALSE
 - b. TRUE
23. Which are benefits of using pipeline dictionary? (select all that apply)
- a. It enables you to pass data to an ISML template
 - b. It shares data across all pipelines
 - c. It provides access to key/value pairs
 - d. It is shared across request within session
24. When a new code version is consolidated, it is a best practice to create a new version and upload to which instance?
- a. Staging
 - b. Development
 - c. Sandbox
 - d. Production
25. Where can you execute demandware scripts? (select all that apply)
- a. Script pipelets
 - b. ISML templates
 - c. Start Nodes
 - d. Decision Nodes
 - e. Eval Nodes
26. What does a form action define? (Select all that apply)
- a. It marks the form as transactional.
 - b. It determines the pipeline flow after an interaction-continue node.
 - c. It specifies whether the form should be validated
27. A rollback transaction control can only be defined once per pipeline
- a. FALSE
 - b. TRUE
28. You can nest forms within other forms using which element?
- a. Include
 - b. List
 - c. Group

d. Element

29. The effective cartridge path can contain custom and system cartridges

a. FALSE

b. TRUE

30. A cartridge is a directory structure that provides a flexible deployment mechanism for customised functionality

a. FALSE

b. TRUE

31. From where you can import cartridges using the standard Ux Studio import dialogs? (Select all that apply)

a. SVN repository

b. A directory

c. CSV repository

d. WebDav Directory

32. A business user wants to add a link to a category page in the body of a content asset. The category's ID is: `mens-jeans`. Which link function will generate the correct link? (Choose one)

a. `'$url('Search-Show', 'cgid', 'mens-jeans')$'`

b. `'$httpUrl('Search-Show', 'cid', 'mens-jeans')$'`

c. `'$include('Products-Show', 'cgid', 'mens-jeans')$'`

d. `'$url('Products-Show', 'cid', 'mens-jeans')$'`

33. A Digital Developer has been asked to configure a content slot with featured Products. Which two slot content types can the developer configure to achieve the requirement? (Choose two)

a. Content Asset

b. HTML

c. Product

d. Recommendation

34. Given the resource bundle files below:

The file `hello.properties` contains:

`greeting=Hello!`

The file `hello_fr.properties` contains:

`greeting=Bonjour!`

Which sample code returns the value from the greeting key in `hello_fr.properties`? (Choose one)

a. `dw.web.Resource.msg('greeting_fr', 'hello', null)`

- b. `dw.web.Resource.msg('greeting', 'hello_fr', null)`
- c. `dw.web.Resource.msg('greeting', 'hello', 'fr')`
- d. `dw.web.Resource.msg('greeting', 'hello', null)`

35. A Digital Developer is tasked with converting the Universal Containers site from using pipelines to using controllers. As a temporary fix, the Developer wants to call the Account-Login pipeline from a new controller and return to the new controller after login. The Account-Login pipeline has a login form. What should the Developer do to accomplish this? (Choose one)

- a. Convert the Account-Login pipeline to a controller.
- b. Use the `Pipeline.execute()` method to call the Account-Login pipeline.
- c. Use the `Pipeline.call()` method to call the Account-Login pipeline.
- d. Add a URL Redirect to the Account-Login pipeline.

36. A Realm is a Digital instance used only by developers.

- a. TRUE
- b. FALSE

37. Merchants use Business Manager to manage products and catalogs.

- a. TRUE
- b. FALSE

38. You can import SiteGenesis through site import at any time without risk.

- a. TRUE
- b. FALSE

39. Catalogs are not shareable between sites within an organization.

- a. TRUE
- b. FALSE

40. A site must have one and only one site catalog.

- a. TRUE
- b. FALSE

41. To upload your code to a Digital server:

- a. Copy files to the root folder on the web server.
 - b. Connect to a production server in a PIG.
 - c. Create a server connection in Studio.
 - d. Contact Digital support to open a server connection for you.
42. To find text in any workspace file:
- a. Select File > Find Text.
 - b. Select Search > Search.
 - c. Select Edit > Find.
 - d. Use the Windows search option.
43. A SiteGenesis Storefront cartridges are an empty cartridges with empty sub-folders.
- a. TRUE
 - b. FALSE
44. You should create a new cartridge when you need to build generic functionality that can be reused in many sites.
- a. TRUE
 - b. FALSE
45. You can view a list of all files in a cartridge located on a Digital server from Business Manager.
- a. TRUE
 - b. FALSE
46. Each pipeline can have:
- a. A Join node, a Transition node, and an End node.
 - b. A Start node, a Transition node, and a Jump node.
 - c. A Start node, a Transition node, and an Interaction node.
 - d. A Start node, a Transition node, and a Stop node.
47. The Pipeline Dictionary holds the following default objects:
- a. GlobalDefault
 - b. CurrentHttpParameterTable, CurrentScope, CurrentRequest, CurrentForms, CurrentPipeline
 - c. CurrentHttpParameterMap, CurrentSession, CurrentRequest, CurrentForms, CurrentCustomer
 - d. CurrentCustomer, CurrentSession, CurrentRequestor, CurrentFormValue, CurrentHTTPParameterMap
48. You have to mention the cartridge name when importing a script from another cartridge into a script file
- a. TRUE
 - b. FALSE

49. The `<isinputfield>` is a custom tag used to populate form field attributes.
- a. TRUE
 - b. FALSE
50. An Interaction node is used to display and submit a form.
- a. TRUE
 - b. FALSE
51. A transition node named 'next' will continue pipeline logic if a form has been successfully validated for a 'subscribe' action to occur.
- a. TRUE
 - b. FALSE
52. Custom objects are the only way to store custom data in Commerce Cloud Digital.
- a. TRUE
 - b. FALSE
53. The "custom" keyword is required to access custom attributes of an object.
- a. TRUE
 - b. FALSE
54. A custom object needs a primary key.
- a. TRUE
 - b. FALSE
55. Custom object instances can only be created in Business Manager.
- a. TRUE
 - b. FALSE
56. An implicit transaction means that the pipelet commits if PIPELET_NEXT is returned.
- a. TRUE
 - b. FALSE
57. To implement Explicit Transactions you use the `beginTransaction()` method in a script pipelet.
- a. TRUE
 - b. FALSE
58. `UpdateObjectWithForm` can update any object even if it is not persistent.
- a. TRUE
 - b. FALSE

59. `UpdateFormWithObject` will update any form fields where the binding matches the object attributes.

- a. TRUE
- b. FALSE
